M2M Data Corporation

M2M provides low cost, reliable, cloud-based services for remote operation and management of industrial equipment.

Cloud-based Solutions

M2M offers two cloud- based subscription service solutions:

- Our SmartConnect™ technology platform is used by our customers to rapidly develop, operate & maintain their own remote operation and management applications.
- RMS and Aquavx are single-source, end-to-end solutions, including hosted remote operation and management applications.

Both solutions are provided from the same technology base, which was developed and is owned by M2M.

Industries Served

M2M's services are used in many industries including oil & gas; power generation; water & waste-water; and over-the-road heavy vehicles. M2M has few direct competitors in these markets. Assets monitored by M2M are primarily engines, compressors, power generators, natural gas wells, oil wells, water lift pumps, storage tanks, and vehicle hydraulic systems.
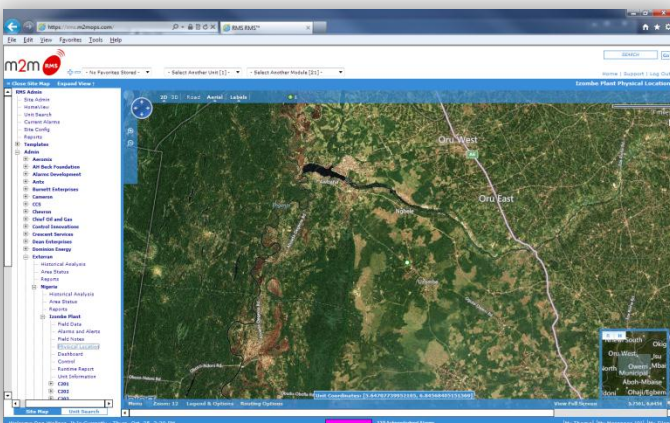

Where We Do Business

M2M's services are available worldwide and are currently provided to customers with equipment located throughout the USA, Canada, Mexico, Africa and the Middle East.
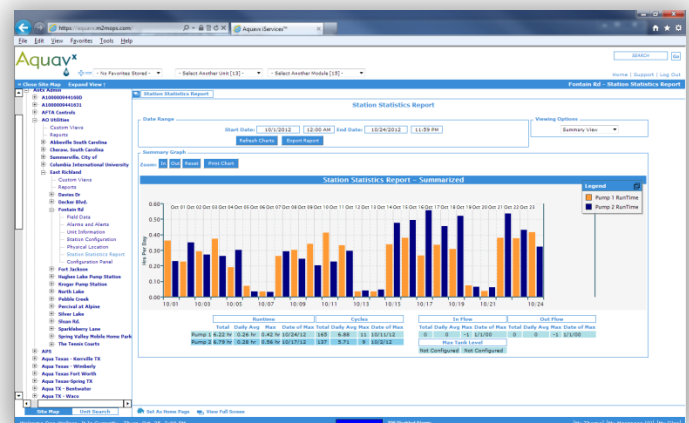

Why Use M2M's Services?

M2M's services minimize capital expenditure, are simple to deploy, and are accessed through an intuitive, secure web-based interface.
M2M has developed a wide range of technology expertise ranging from database and Internet technologies to satellite and other wireless communications which makes us the perfect remote operation and management partner.

Who Uses M2M's Services?

M2M has about 12,000 assets in its system with a total of over 1 million measured variables (temperature, pressure, flow, etc.) for about 260 customers, including Chevron, Williams, Caterpillar, Exterran, CSI, Enernoc, and many others.

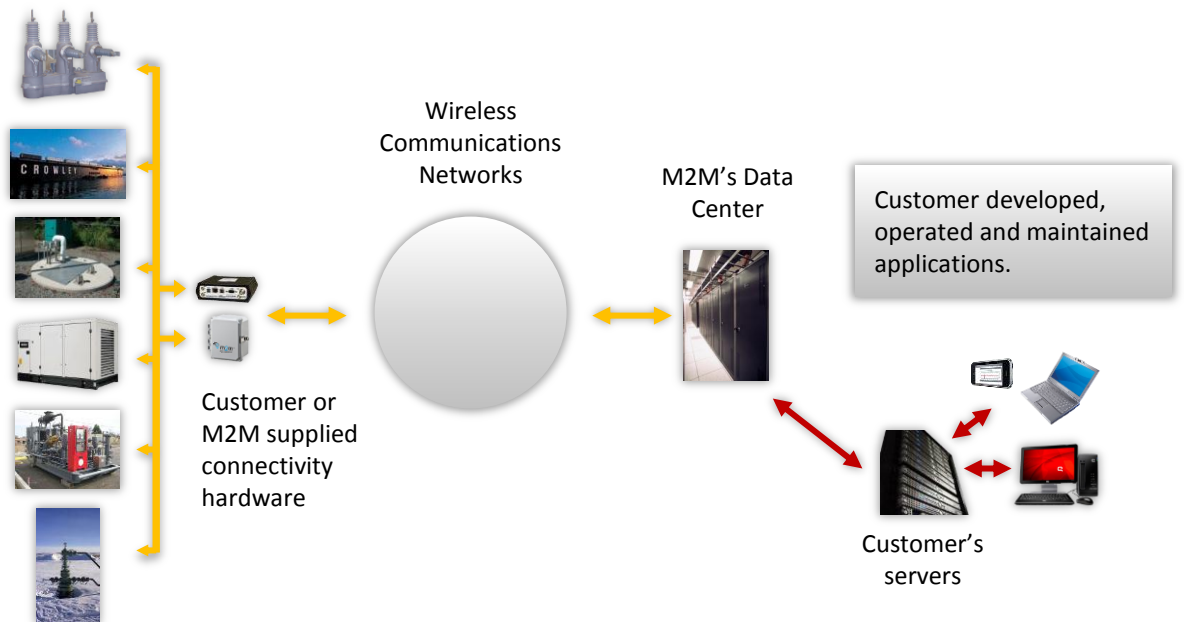

RMS is our solution for oil, gas and general industrial applications. RMS helps operations managers efficiently utilize manpower resources, keep up with production demand, meet contractual obligations, and maximize investments in capital equipment.

Aquavx is the SCADA alternative for water and wastewater utilities and operators. Offered at the cost of an auto-dialer, Aquavx enables customers to accurately monitor and control their equipment and streamline operations with increasingly fewer resources.
